

Drilling performance is not just good luck, it's  about good planning

Wellbore performance

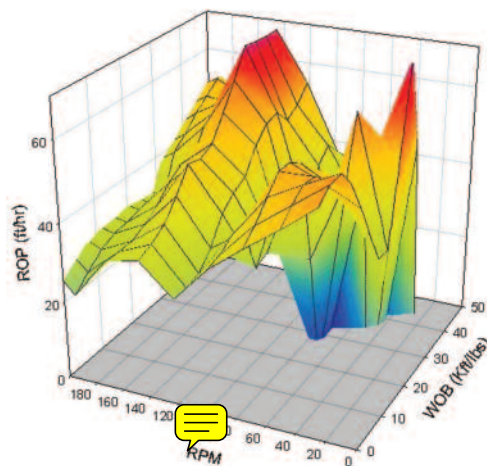

Senergy Wellbore Performance offers a unique and technically independent drilling group to support and manage the drilling process. The team is fully supported and augmented by Senergy's in-house geomechanics, geoscience and well engineering specialists, providing a solution-based answer, addressing all aspects of the drilling process.

With a track record for excellence in many different geographical locations and environments, we provide a flexible and impartial view of all drilling processes and elements, objectively identifying the key relationship between the formation / bit and drive mechanism. We supply a 'best fit' solution for our clients' wellbore requirements, focusing on all aspects of borehole performance and quality.

Wellbore performance is:

- ⦿ enhanced drilling performance
- ⦿ improved economical saving for the customer
- ⦿ delivering directional and wellbore requirements
- ⦿ drilling safely and efficiently

Where elevated drilling costs are commonplace, we objectively and independently identify the best bit / drive mechanism and the techniques required to drill the section in the most efficient and safest manner. The process is based on reviewing practical offset data in conjunction with identifying any applicable new technology and utilising this within our enhanced drilling process.
